

CubeServ Analysis Office Report Book Simple, fast, flexible

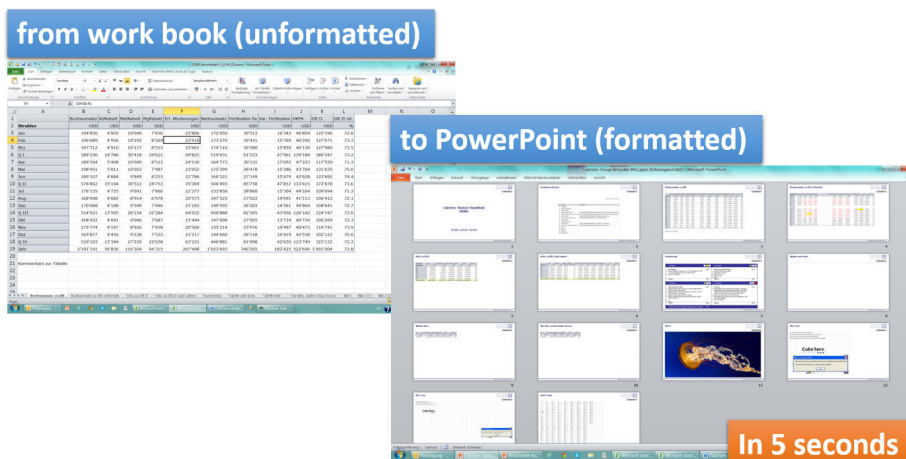

Application Purpose

Creation of highly formatted PowerPoint and Excel report books and decision papers using SAP BusinessObjects Analysis, edition for Microsoft Office.

The CubeServ Analysis Office Report Book

With SAP BusinessObjects Analysis, edition for Microsoft Office, SAP has taken a significant step towards the Microsoft Office world. This product, which replaces the BEx Analyzer, continues the path towards “native Excel” and further reduces the devastating complexity of the tool landscape of recent years.

At the same time, it takes the pressure off IT departments as it is easier to operate for endusers. Analysis simplifies access to the OLAP data source. But this is only part of the process of creating reports.

Fast, simple, flexible

A report book has many components: data from numerous heterogeneous sources (including SAP), the user's own tables, graphics, screenshots and other images, complex comment blocks and much else.

And all these components, some of them highly formatted, are to be presented as a report book in consistent PowerPoint or Excel format. When it is time for the next report, this is then to be created on the basis of the latest data and, in actual fact, with slightly modified components.

Expertise. Value.

- Significant increase in performance during report creation process
- Endusers work in familiar Excel environment
- Flexibility for enduser retained (user can modify and/or insert tables / comments / objects)
- Central adjustment of variables and filters for all data sources. Additional filters can be created centrally.
- Facility to create a report on data source metadata at the click of a button
- No need for (layout) adaptation in PowerPoint
- Simple adaptation in the event of changes to the customer's PowerPoint template
- The application intelligence was integrated into the code to give users more time for their core tasks (usability / reduction in complexity)
- Stabilisation of the report creation process
- Reduction in enduser training requirements, increasing imperviousness to staff turnover
- No additional frontend applications
- Users can work online and offline

Combined Thinking for Success

We believe that success is based on making the right decisions. We have specialised in enabling you to make the best decisions possible – by strengthening your business enduringly and sustainably through strategic information management and the smart use of Business Intelligence.

CubeServ consequently offers comprehensive concepts based on SAP: from consulting to value-oriented performance management, from a coherent BI strategy to the implementation and operation of tailor-made BI solutions.

Success also requires experience. CubeServ has been an SAP Service Partner and SAP Recognized Partner for Business Intelligence, Data Warehousing, In-Memory Computing and SAP Database for over 15 years.

Over 3000 national and international BI & analytics projects have taught us to work constantly at the latest level of innovation – and to listen to our customers. Because only individually tailored premium consulting will enable your business to achieve the success it deserves.

We look forward to your challenges!

SAP® Recognized Expertise
 in Business Intelligence
 in Data Warehousing
 in In-Memory Computing and SAP Database

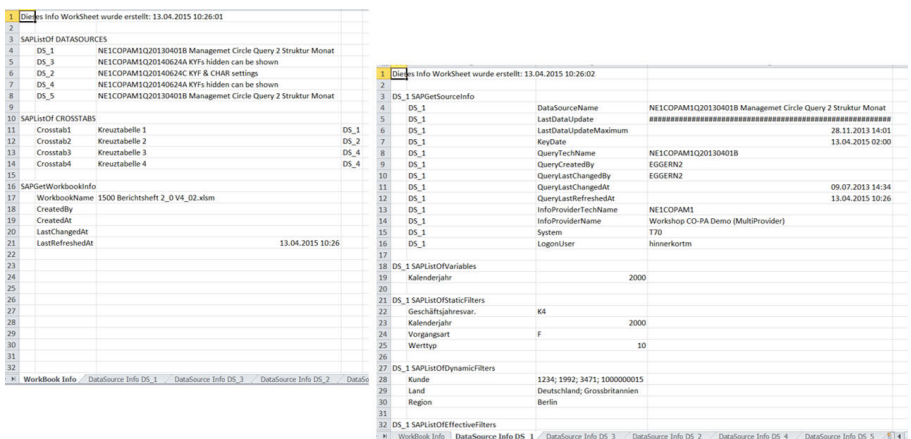

The CubeServ Group is a SAP Partner Service. All brand and product names listed are registered trademarks of the individual companies.

Controllers who create report books on a regular basis (and that is the majority) complain that 80% of their time is taken up with assembling the components and producing the final layout. This time could be better spent working on content.

All variables and filters on one worksheet

With the **CubeServ Analysis Office Report Book**, we can provide significant improvements in performance for any member of staff, not only these controllers, who has the task of creating report books and decision papers with high formatting requirements.

Metadata for the workbook and for the data sources at the click of a button

Our aim is to ensure simplicity, speed and flexibility for endusers in day-to-day business processes; and we have realised this with the **CubeServ Analysis Office Report Book**.

Implementation

Straightforward implementation of the **CubeServ Analysis Office Report Book**:

- Analysis is implemented on your systems
- You receive the **CubeServ Analysis Office Report Book** application as an Excel workbook
- You open the supplied Excel workbook
- You add a data source
- You create a report book in PowerPoint / Excel with one click

The entire implementation incl. the creation of the first report book takes less than 5 minutes. Our consultants will be on hand to assist you with any required adaptation to your company-specific layout.
